E-Commerce Platform - User Manual (Beginner Friendly)

Prerequisites:
- .NET 8 SDK
- Node.js (LTS)
- Git (optional)

Run Backend:
1) Open a terminal and go to backend/Ecommerce.Api
2) dotnet restore
3) dotnet run
   The API will start at http://localhost:5000. Swagger: /swagger

Run Frontend:
1) Open another terminal and go to frontend
2) npm install
3) npm run dev
   The app runs at http://localhost:5173

Login:
- Admin: admin@shop.com / Admin@123
- User : user@shop.com / User@123

SQLite:
- The database file 'ecommerce.db' is created in the API project folder automatically.

Notes:
- Payment is mocked (no real charge).
- For JWT-protected endpoints, copy the token from /auth/login and use the Authorize button in Swagger.
